APPLICATIONS DEVELOPED

<u>Final Transmissions</u> — An Augmented Reality Experience <u>LIVE GITHUB</u>

- Used AR.js and Aframe to display 3-dimensional models and overlay the images on a user's cell phone camera display when user entered proximity to an AR encounter
- Full ideation and project design via agile methodologies, as well as extensive problem solving
- Used Node.js with Express and MySQL for storing and transmitting data to client, Pug Templating to expedite user data conveyance, JavaScript and Axios for client logic, and Augmented Reality and Google Maps to present visual cues to user

<u>Loot Cave</u> — A Web-Based Version of Concentration Game

- Used React.js with Redux to build reusable application components and communicate between them
- Created flexible, mobile-responsive design and layout using CSS and Flex
- Added extra features to game logic for varied game play

<u>Next Meal OC</u> — Orange County's Soup Kitchen Finder LIVE GITHUB

- Designed and coded mobile application to help Orange County residents experiencing homelessness or financial insecurity gain greater access to food resources
- Used JavaScript and jQuery along with CSS and Bootstrap 3 to program an interface with a focus on ease of use.
- Utilized PHP and MySQL to access meal center data via AJAX calls from the client side
- Leveraged Geocoding and Google Maps APIs to provide location and map data to the user

EDUCATION

California State University, Long Beach — Master's Degree, English
California State University, Long Beach — Bachelor's Degree English
LearningFuze Web Development Program

TECHNICAL SKILLS

STRONG

JavaScript (ES5 / ES6) + jQuery

React.js + Redux

Data integrations and APIs

HTML5 / CSS3

BootStrap / Materialize / Flex

Debugging via Chrome Dev Tools

Git / GitHub

Augmented Reality (AR)

EXPERIENCED

PHP

MySQL / Firebase

Local Environment Setup (MAMP)

Regular Expressions (Regex)

Data Templating (Pug)

Cloud Computing (AWS EC2)
